

Things that are ruined by AI!

AI is slowly destroying our planet! It uses one-five million gallons of water a DAY! AI itself used 17 billion gallons of water as of 2023. Last year 2025, AI used 202 BILLION GALLONS OF WATER!. Artificial intelligence is taking over people's jobs, raising global temperatures, hurting the environment AND increasing pollution!

How is it ruining the environment? Data centers, things that make AI run, are ruining the environment by being placed in small and rural areas that are thriving with animal life. The data centers are making a low humming sound that is driving away animal life. They are also polluting both air and water. "Carbon dioxide increased by 193%. Nitrous oxide rose by 111% and dangerous particle emissions jumped by 139%." That's according to VCUNews. According to Nature Forward "Data centers pollute the water by adding chemicals such as biocides, corrosion inhibitors, and heavy metals like zinc." It's also adding on to light pollution. According to environmental health project, "Data centers generate light pollution. Hyperscale facilities require all-night lighting that disrupts the natural (circadian)

rhythms of the body, including melatonin production (the hormone that regulates sleep) and sleep-wake cycles. Light pollution is also disturbing migration patterns and habitat development among birds, butterflies, bats, cats, and turtles—to name only a handful.”. Our world is falling apart but all we care about is some AI generated image of a youtuber making a bunch of drama! We need to start worrying about OUR WORLD ,EARTH! According to Unep.org and many other websites! “1. Environmental Destruction (The "Hidden" Cost)

- *Massive Energy Consumption: AI data centers require immense amounts of electricity. By 2034, they are expected to consume as much energy as the entire nation of India. In 2023, US data centers consumed as much energy as Ireland.*
- *Water Depletion: Training and running AI models consumes significant freshwater resources for cooling, sometimes depleting local water supplies, particularly in areas already facing scarcity.*
- *Carbon Footprint: AI's carbon emissions are skyrocketing. Training one large model can generate 5 times the lifetime emissions of an average American car.*

2. Societal and Ethical Harms

- *Deepfakes and Disinformation: AI is supercharging the creation of fake, harmful content, including nonconsensual imagery and, as noted by the UN, accelerating racist, misogynistic, and xenophobic content.*
- *Job Displacement: While AI creates some jobs, it threatens to automate and displace millions of existing roles in sectors like manufacturing, law, and administration.*
- *Widening Inequality: The economic benefits of AI are currently concentrated among corporations, threatening to widen the gap between the rich and the poor.*
- *Surveillance and Privacy: AI increases the ability of governments and corporations to conduct mass surveillance and predict or manipulate human behavior. [\[1,5\]](#) “*

Our planet is being destroyed, Kids are growing to love AI and getting anti-social! Its wasting BILLIONS UPON BILLIONS OF GALLONS OF WATER YEARLY. Jobs are being taken, like actors, therapist, and even just workers in stores are being replaced by robots. This is our world. Our planet. We do NOT NEED AI OR DATA CENTERS!
