

How to make a Lava Lamp - Science Experiment

Supplies you will need

- A container (I used a mason jar)
- Cooking oil
- Baking soda
- Vinegar
- Pipette or Squeeze Bottle
- Food coloring

Instructions

Step 1: Add baking soda to the container

Add enough baking soda to cover the bottom of your container, plus a little extra.

Step 2: Add cooking oil to the container

Start pouring the cooking oil directly on top of the baking soda. Don't worry – they won't mix. Even if they mix at first, the baking soda will settle back to the bottom of your container.

Step 3: Create your colored vinegar in a separate container

Step 4: Use a pipette/squeeze bottle to add colored vinegar to the container

The more colored vinegar you add, the bigger the reaction!
