# By the Numbers: Broadband Access in Ohio

Data released by BroadbandOhio measured Ohioans' access to broadband-level Internet speeds of at least 25 megabits per second (Mbps) by county, using a variety of sources including speedtest data from February 2020 to August 2021 as well as carrier filings and reports. The findings were used to develop county-level profiles on the current access in terms of populated area and households.

Numbers related to those profiles include the following:

- **98 percent**: Amount of Franklin County households with broadband access, the highest number reported.

- **12 percent**: Amount of Monroe County households with broadband access, the lowest number reported.

- **12**: Number of counties where over 90 percent of households had broadband access.
 - **11**: Number of counties where 80 to 90 percent of households had broadband access.
 - **20**: Number of counties where 70 to 80 percent of households had broadband access.

- **18**: Number of counties where 60 to 70 percent of households had broadband access.

- **Eight**: Number of counties where 50 to 60 percent of households had broadband access.

- **Seven**: Number of counties where 40 to 50 percent of households had broadband access.

- **Eight**: Number of counties where 30 to 40 percent of households had broadband access.

- **Three**: Number of counties where 20 to 30 percent of households had broadband access.

- **One**: Number of counties where 10 to 20 percent of households had broadband access.

- **93 percent**: The amount of Hamilton County's populated area that has broadband access, the highest number reported.

- **2 percent**: The amount of Vinton County's populated area that has broadband access, the lowest number reported.

- **Two**: Number of counties where over 90 percent of the populated area had broadband access.
 - **Five**: Number of counties where 80 to 90 percent of the populated area had broadband access.
 - **Four**: Number of counties where 70 to 80 percent of the populated area had broadband access.
 - **Six**: Number of counties where 60 to 70 percent of the populated area had broadband access.
 - **Five**: Number of counties where 50 to 60 percent of the populated area had broadband access.
 - **Five**: Number of counties where 40 to 50 percent of the populated area had broadband access.
 - **10**: Number of counties where 30 to 40 percent of the populated area had broadband access.
 - **19**: Number of counties where 20 to 30 percent of the populated area had broadband access.
 - **23**: Number of counties where 10 to 20 percent of the populated area had broadband access.
 - **Nine**: Number of counties where less than 10 percent of the populated area had broadband access.

- **Nine**: Number of local projects listed under a relevant section of BroadbandOhio's website. There is also a Community Accelerator Program, a "FINDER" tool for access to devices and hotspots, and outreach efforts to provide connectivity devices through schools.
