s

- * NOAA/NWS is not required to transmit an RWT. Other alerts sent during the same period verify reception. If none are received during the period, NOAA audio input to the ENDEC should be checked to verify that audio is present.

*1 Due to coverage of an active news event, the RWT as scheduled was omitted for the reporting period.

*2 RMT failed. The audio message was not forwarded, although the tones were.

*3 The ENDEC GPIO was disabled for a test to investigate the failure in *2. No tones were sent on-air. An alternate audio route was created to troubleshoot an automation switching problem. This changed the insertion point for the EAS audio, so the ENDEC was not in the correct audio path. The problem was corrected. The test on 3-May-2018 at 15:29 verified the correction.

*4 Scheduled data network reconfiguration at the studio affecting all internal and Internet access was conducted during the period of 22:00 13 May 2018 through 13:00 14 May 2018. This affected IPAWS CAP originated messages. NOAA NWS messages

received from WXM37 and PEP connectivity into the facility conveyed by the NPR Squawk Channel were not affected.

- *5 Addendum to entry *4; ENDEC equipment was out of service intermittently during the reconfiguration.
Full operation was restored by 23 May 2018.
- *6 No Required Monthly Test nor Required Weekly Test was originated by the LP-1 for this period. The Required Monthly Test originated on 8/6/18 at 10:00:50 by Albany County Civil Authorities serves as an alternative test for the system.

The individual log for KUWR-FM / KUWR-HD1 has been checked and cross-referenced for accuracy.

This summary (with comments) and accompanying information is detailed / located here:

<http://wyomingpublicmedia.org/station-eas-operational-log>

It has been checked and verified as accurate. A signed/dated copy of this document is maintained in the WPR Engineering area.
